

EXPO 2015 INNOVATION

The IDEASS Programme collaborates with the activities of the KIP Pavilion at Expo 2015, with the objective of promoting innovations for a more attractive and sustainable territorial development. The innovations published on the IDEASS website are diffused among experiences and networks participating in the KIP Pavilion exhibitions to provide new and accessible solutions for improving territorial quality of life.

In this framework, a research is also ongoing to identify the best technologies and methodologies for territorial development exhibited in the different Pavilions of Expo Milano 2015. The articles presenting these innovations are available on the IDEASS website.
